ABOUT US

We are the world's largest supplier of residential UV water purification systems. Our systems treat nearly 20 million liters of water every minute, protecting millions of people in over 100 countries. The same UV technology is used by our municipal business (TrojanUV) to disinfect the drinking water for some of the biggest cities in the world. New York, Paris, Vancouver, Rotterdam, and Las Vegas are just a few of the cities who have recognized the benefits of UV. Do a quick online search for "New York City UV disinfection", and you'll see what we mean.

For more information about the benefits of UV and how you can take back your tap, visit ***info.viqua.com/uvforme***
